China's Space Solar Power Stations: The Future of Unlimited Energy

China is pushing the boundaries of renewable energy with its ambitious plan to build kilometer-wide space solar stations that will beam energy directly to Earth.

Country aims to shine in space-based solar power tech to boost clean

A space-based facility will be able to harness sunlight around the clock without being affected by factors such as the atmosphere and weather, potentially yielding eight times more power

China to launch one-kilometre-wide solar farm into space

The solar farm, which would be launched into space using heavy-lift rockets, is expected to stretch one kilometre in width and continuously harvest renewable energy for Earth.

China's Potential Space Solar Breakthrough

Reports suggest that once fully operational by 2050, the space-based solar array will send a similar amount of electricity into the grid as a nuclear power station. Expected to collect

Dezeen Agenda features China's plans to launch solar farm into space

The latest edition of our weekly Dezeen Agenda newsletter features China's solar farm set for launch into space. Subscribe to Dezeen Agenda now.

China's space lab module powered by huge, flexible solar panels

The China Manned Space Agency (CMSA) has revealed that the first lab module of China's space station is being powered by a "pair of wings" composed of huge, flexible solar arrays.
