About DSO Entity DSO Entity is a technical expert body mandated by the Electricity Market Regulation (2019/943/EU) to promote the functioning of the electricity market and to

Grid operators: TSO and DSO explained - gridX

A Distribution System Operator (DSO) operates, manages, and sometimes owns the local and regional energy distribution networks, which transport electricity to end users.

Distribution System Operators (DSOs)

Distribution System Operator (DSO) in the European Union Internal Electricity Market is legally defined in Article 2 (29) of the Directive (EU) 2019/944 of the European Parliament and of the

The role of the DSO in the Electricity market - from a Smart Grid

The DSO could engage in energy efficiency work, offering services to consumers and other market players. There are many different possibilities; one example is the energy efficiency solution in

National Grid DSO

National Grid's Distribution System Operator (DSO) has secured its biggest long term flexibility portfolio to date, awarding 196GWh of flexibility availability in the latest annual tender, a tenfold increase on

THE ACTIVE DISTRIBUTION SYSTEM OPERATOR (DSO)

Electricity and gas distribution system operators (DSO) are widely recognised as key players in the energy transition. This is because of their proximity to final energy consumers and because of the

What is a DSO? An Essential Guide to Distribution

What is a Distribution System Operator? A distribution system operator (DSO) is a method of operation that evolved from modern distribution network operators to

Distribution System Operator

2.2.3 Distribution System Operator (DSO) The DSO is responsible to transport energy to the consumers in an efficient, sustainable and cost-effective way. The DSO maintains the security of the network
