Overview

World energy resources are the estimated maximum capacity for energy production given all available resources on.

Energy resources

Energy Resource

Renewable energy resources are forms of energy that are naturally replenished on our planet. Examples of traditional renewable resources are hydropower and biomass (e.g., plant fuels such as wood)

What are the different types of renewable energy?

Each type of renewable energy contributes different amounts to our electricity mix, alongside non-renewable energy types such as fossil fuels or nuclear energy.
