

Fso floating storage and offloading

Overview

A floating production storage and offloading (FPSO) unit is a floating vessel used by the offshore oil and gas industry for the production and processing of hydrocarbons, and for the storage of oil. When a tanker is chosen to transport the oil, it is necessary to accumulate oil in. The FPSO is moored at a depth of 2,600 m in Block 249 Walker Ridge in the US and is rated for 80,000 bbl/d (13,000 m /d). • 2020-01-14 at the • 2014-12-18 at the FPSO Seillean - the World's first DP production vessel - BP SWOPS.
