Perfect power (1, 4, 8, 9, 16, 25, 27,)

The idea is to iterate through all integers from 1 to square root n and find all possible perfect powers. To find the perfect powers, run a loop starting from $i * i$, multiplied by i in each

number theory

A positive integer n is called a perfect power if and only if there exist two positive integers p, q , both are greater than 1, such that $n = p^q$. For example $8 = 2^3$, $36 = 6^2$ are perfect powers, but
