Overview

While both Absorbent Glass Mat (AGM) and Gel batteries are categorized as Valve-Regulated Lead-Acid (VRLA) batteries and are commonly used in vehicles and backup power systems, they differ in several key performance aspects. A valve regulated lead-acid (VRLA) battery, commonly known as a sealed lead-acid (SLA) battery, is a type of characterized by a limited amount of electrolyte ("starved" electrolyte) absorbed in a plate separator or. Originally a kind of gel battery was produced in the early 1930s for portable valve (tube) radio LT supply (2, 4, or 6 V) by adding silica to the sulfuric acid. Lead-acid cells consist of two plates of lead, which serve as , suspended in an consisting of diluted. Many modern motorcycles and (ATVs) on the market use AGM batteries to reduce the likelihood of acid spilling during cornering.
