Solar power plants use one of two technologies:

- o Photovoltaic (PV) systems use solar panels, either on rooftops or in ground-mounted solar farms, converting sunlight directly into electric power.
- o Concentrated solar power (CSP) systems use mirrors or lenses to concentrate sunlight to extreme heat to make steam, which drives a turbine to generate electricity.

How Solar Energy Produces Electricity? How Does Solar Thermal Generate Electricity? How Do Photovoltaic Solar Panels Generate Electricity? How Can You Generate Solar Electricity at Home? The Future Is Bright with Solar Energy

The energy of collected sunlight is transformed directly into electricity thanks to the photovoltaic effect. In short, this effect takes place when photons (tiny electromagnetic particles of light) are absorbed by a specific material, which in turn releases electrons from atoms. These released electrons are then available to do the electrical work, See more on greentumble National Grid Group
